

Akshay Soni

Senior Software Developer
Pune, India | Contact Number: 8871667107

PROFILE

Software Engineer with 7+ years in Python and AWS, specializing in high-level design (HLD) of scalable, low-latency distributed systems via microservices, event-driven architectures, and serverless patterns (Lambda, API Gateway, EventBridge, Step Functions). Led HLD for resilient workflows, high-performance APIs, and real-time monitoring systems—using priority queues for efficient task orchestration—achieving 20-25% faster responses, 25% higher concurrency, 20% reduced latency, and 25% less downtime. Passionate about principled system design, problem-solving, and collaboration for large-scale solutions.

SKILLS

Programming Languages: Python, SQL, NoSQL
Frameworks: FastApi, Boto3
Distributed Computing: Hadoop, Spark, Databricks, Redis, Kafka
Software Development: Data Structure and Algorithms, System Design
Database Management: PostgreSQL, MySQL
Cloud Platform : AWS (Lambda, EC2, S3, Step Function, Event Bridge, SQS)

EXPERIENCE

- Senior Technology Associate**
Synechron

Aug 2024 - Present
Pune, India

 - Accelerated financial risk analysis by developing advanced Python scripts with multiprocessing and deploying them on AWS Lambda, enabling scalable and efficient processing for high-volume data.
 - Enhanced GSM domain capabilities by delivering robust, tailored solutions that met project requirements and improved overall system reliability and improve SLA.
- Senior Software Developer**
Opcito Technology

Jan 2022 - Aug 2024
Pune, India

 - Boosted API performance by orchestrating high-performance RESTful APIs using FastAPI, achieving 20% faster response times and 25% greater concurrent user capacity through seamless integration with AWS API Gateway.
 - Delivered a resilient serverless Python application on AWS Lambda using Boto3 for integrations with S3 and RDS, while implementing event-driven architecture with EventBridge, Step Functions, CloudWatch, and Docker—automating workflows and enhancing monitoring for scalable cloud operations.
 - Improved system efficiency in a microservices architecture by developing Flask-based applications with optimized REST APIs, resulting in 20% better performance and 15% reduced response times.
 - Streamlined integration and asynchronous processing by implementing RabbitMQ for message queuing and Celery for task management, increasing overall system efficiency by 20%.
- Data Engineer**
Futureense Technologies

Aug 2021 - Jan 2022
Bangalore, India

 - Reduced big data processing time by 20% through Apache PySpark implementation for distributed computing, unlocking real-time insights from large datasets.
 - Accelerated data-driven decision-making by leveraging Apache PySpark to analyze and transform massive datasets, improving processing speed by 20%.
- Software Engineer**
Amdocs SmartOps India

Nov 2018 - Aug 2021
Pune, India

 - Reduced service downtime by 25% and improved response times by 15% across 10+ Amdocs accounts by developing a cutting-edge SLA Monitoring Tool using Python and Flask.
 - Empowered data-driven decisions by designing web solutions with real-time SLA analysis, insightful visualizations, and RESTful APIs—streamlining management of users, SLAs, and accounts.

EDUCATION

Lakshmi Narain College of Technology
Bachelor of Engineering , Computer Science

Bhopal, India
2014 - 2018
