

# Akshay Soni

Senior Python & AWS Engineer · Distributed Systems & Serverless Architectures

Pune, India · [+91 88716 67107](tel:+918871667107) · [akshaysoni460@gmail.com](mailto:akshaysoni460@gmail.com) · [linkedin.com/in/imakshaysoni](https://linkedin.com/in/imakshaysoni) · [github.com/imakshaysoni](https://github.com/imakshaysoni)

## PROFESSIONAL SUMMARY

Senior Python & AWS Engineer with 7.5+ years designing and shipping scalable distributed systems across fintech, telecom, cloud infrastructure, and big data. Specializes in high-level design (HLD) of microservices, event-driven, and serverless architectures — delivering measurable results: 25% reduction in service downtime, 20% improvement in API throughput, and 25% increase in concurrent user capacity. Passionate about system design principles, fault-tolerant architecture, and building production systems that perform reliably at scale.

## TECHNICAL SKILLS

**Languages:** Python · SQL · NoSQL

**Frameworks & Libraries:** FastAPI · Flask · Django · Boto3 · Celery · SQLAlchemy

**Cloud & DevOps:** AWS (Lambda · EC2 · S3 · API Gateway · Step Functions · EventBridge · SQS · CloudWatch · RDS) · Docker · CI/CD · Git

**Distributed Systems:** Apache Kafka · Apache Spark (PySpark) · Hadoop · Databricks · Redis · RabbitMQ

**Databases:** PostgreSQL · MySQL · DynamoDB

**Architecture & Design:** Microservices Architecture · Event-Driven Architecture · Serverless · High-Level Design (HLD) · REST APIs · System Design

**Practices:** Data Structures & Algorithms · Agile · Scrum · Code Review · Technical Documentation

## PROFESSIONAL EXPERIENCE

**Senior Associate Technology (Python & AWS)** · Synechron

Pune, India | Aug 2024 – Present

- Accelerated high-volume financial risk analysis by developing multiprocessing Python scripts deployed on AWS Lambda — enabling parallel execution across thousands of daily data records and reducing processing time by 30%.
- Engineered robust GSM domain solutions in Python that improved system SLA compliance and directly reduced incident escalation rate — contributing to measurable reliability improvements across the production environment.
- Designed and maintained scalable cloud-native workflows on AWS (Lambda, S3, CloudWatch), ensuring sub-second SLA response times for critical financial operations serving enterprise clients.
- Led and mentored a team of 2 engineers** — conducted regular code reviews, defined technical task breakdown, and ensured on-time delivery of sprint commitments across GSM domain feature work.

**Senior Software Engineer** · Opcito Technologies

Pune, India | Jan 2022 – Aug 2024

- Boosted API throughput by 20% and increased concurrent user capacity by 25% — architected high-performance RESTful APIs using FastAPI integrated with AWS API Gateway, serving production traffic at scale.
- Eliminated manual deployment overhead by engineering a fully serverless Python application on AWS Lambda with event-driven orchestration via EventBridge, Step Functions, and CloudWatch — reducing ops effort by ~30%.
- Improved async task throughput by 20% by integrating RabbitMQ (message queuing) and Celery (task management) into a microservices architecture, replacing synchronous bottlenecks in a high-frequency data pipeline.
- Managed and mentored a team of 2 engineers** — drove sprint planning, technical task delegation, and code reviews, enabling the team to consistently ship production features on schedule across the serverless and API delivery tracks.

## **Data Engineer** · Futureense Technologies

Bengaluru, India | Aug 2021 – Jan 2022

- Reduced batch processing time by 20% by migrating legacy ETL jobs to distributed Apache PySpark pipelines on a Hadoop cluster — enabling near-real-time insights from datasets previously requiring 4+ hours to process.
- Transformed 10M+ record unstructured datasets into analytics-ready formats using PySpark, accelerating reporting cycles for 3+ downstream business teams from weekly to daily cadence.

## **Software Engineer** · Amdocs SmartOps India

Pune, India | Jul 2020 – Aug 2021

- Reduced service downtime by 25% and improved response times by 15% across 10+ enterprise accounts — built a production SLA Monitoring Tool in Python + Flask adopted as a core ops tool across the global delivery org.
- Designed real-time web dashboards with SLA visualizations and RESTful APIs, replacing manual reporting processes and saving 5+ hours/week in account manager overhead.
- Delivered the tool as a solo engineer: full-stack ownership from PostgreSQL schema design to frontend charting — demonstrating end-to-end architecture capability within a 200+ engineer organization.

## **Associate Software Engineer** · Amdocs SmartOps India

Pune, India | Nov 2018 – Jul 2020

- Contributed to Amdocs Activation Manager — a mission-critical provisioning platform serving global telco clients — developing Python backend modules and RESTful API integrations.
- Built automation scripts eliminating repetitive manual workflows, reducing team operational overhead by an estimated 3–4 hours/week and improving reliability of deployment pipelines.
- Earned Amdocs Value Award (Q3 FY2019-20) and SRE Team Award (Mar 2020) for impactful delivery and cross-functional collaboration within a large-scale enterprise engineering org.

## **EDUCATION**

---

### **Bachelor of Engineering, Computer Science** · Lakshmi Narain College of Technology

Bhopal, India | 2014 – 2018

## **CERTIFICATIONS & RECOGNITION**

- 
- Ultimate AWS Certified Developer Associate — Udemy (Jun 2021) | Target: Official AWS CDA exam (in progress)
  - Amdocs Value Award — Best Performer FY 2019–20 | SRE Team Award — Mar 2020 | Team Value Award — Aug 2020
