

Akshay Soni

Senior Python & AWS Engineer · Distributed Systems & Serverless Architectures

Pune, India · +91 88716 67107 · akshaysoni.dev@gmail.com · linkedin.com/in/imakshaysoni · github.com/imakshaysoni

PROFESSIONAL SUMMARY

Senior Python & AWS Engineer with 8 years architecting scalable, fault-tolerant distributed systems across fintech, telecom, and big data. Expert in high-level design (HLD) of microservices, event-driven, and serverless architectures, driving 25% lower downtime, 20% higher API throughput, and 25% greater concurrent-user capacity in production.

TECHNICAL SKILLS

Python · FastAPI · AWS · SQL/NoSQL · PostgreSQL · Redis · Kafka · Docker · Microservices · System Design · DSA

PROFESSIONAL EXPERIENCE

Senior Associate Technology (Python & AWS) · Synechron

Pune, India — Aug 2024 – Jul 2026

- Accelerated high-volume financial risk analysis by developing multiprocessing Python scripts deployed on AWS Lambda, reducing processing time by 30%.
- Engineered GSM domain solutions in Python that improved system SLA compliance and reduced incident escalation rate across the production environment.
- Designed scalable cloud-native workflows on AWS (Lambda, S3, CloudWatch), ensuring sub-second SLA response times for critical financial operations.
- **Led and mentored a team of engineers** — code reviews, task breakdown, and on-time delivery of sprint commitments across GSM domain feature work.

Senior Software Engineer · Opcito Technologies

Pune, India — Jan 2022 – Aug 2024

- Boosted API throughput by 20% and concurrent user capacity by 25% — architected high-performance RESTful APIs using FastAPI integrated with AWS API Gateway.
- Eliminated manual deployment overhead by engineering a serverless Python application on AWS Lambda with event-driven orchestration (EventBridge, Step Functions, CloudWatch), reducing ops effort by ~30%.
- Improved async task throughput by 20% by integrating RabbitMQ and Celery into a microservices architecture, replacing synchronous bottlenecks in a high-frequency data pipeline.
- **Managed and mentored a team of engineers** — sprint planning, task delegation, and code reviews, shipping production features on schedule.

Data Engineer · Futureense Technologies

Bengaluru, India — Aug 2021 – Jan 2022

- Reduced batch processing time by 20% by migrating legacy ETL jobs to distributed Apache PySpark pipelines on a Hadoop cluster, enabling near-real-time insights.
- Transformed 10M+ record unstructured datasets into analytics-ready formats using PySpark, accelerating reporting cycles for 3+ business teams from weekly to daily.

Software Engineer · Amdocs SmartOps India

Pune, India — Nov 2018 – Aug 2021

- Reduced service downtime by 25% and improved response times by 15% across 10+ enterprise accounts — built a production SLA Monitoring Tool in Python + Flask.
- Designed real-time web dashboards with SLA visualizations and RESTful APIs, saving 5+ hours/week in account manager overhead as a solo engineer, from PostgreSQL schema design to frontend charting.
- Contributed to Amdocs Activation Manager, a mission-critical provisioning platform for global telco clients — developed Python backend modules and REST API integrations, and built automation scripts cutting team overhead by 3–4 hours/week.
- Earned Amdocs Value Award (Q3 FY2019-20) and SRE Team Award (Mar 2020).

EDUCATION

Bachelor of Engineering, Computer Science · Lakshmi Narain College of Technology

Bhopal, India — 2014 – 2018

CERTIFICATIONS & RECOGNITION

- Ultimate AWS Certified Developer Associate — Udemy (Jun 2021)
- Amdocs Value Award (FY 2019–20) — SRE Team Award (Mar 2020) — Team Value Award (Aug 2020)
